Table of contents

Foreword	3
Table of Contents	4
Chapter 1: Mineral compounds	7
1. Classification of mineral compounds	8
2. Nomenclature of mineral compounds	8
➔ Exercises	15
➔ Solutions	17
Chapter 2: Ionic balances	
1. Quantity of the material	24
2. Concentrations	25
3. Electrolytes	35
➔ Exercises	40
➔ Solutions	47
Chapitre 3: Acids and bases	73
1. Introduction	74
2. Acid-base couple in aqueous medium	75
3. Acid-base reaction	75
4. Acid-base role of water	76
5. Strength of acids and bases	77
6. Relationships between the concentrations of species in solution	79
7. Proton exchange (r.e.p) and electroneutrality relationships	83
8. Strong acids and strong bases	85
9. Weak monoacids and monobases	88
10. PH of a mixture of two acids (two bases)	92
11. Buffer Solutions	94
➔ Exercises	103
➔ Solutions	112
Chapter 4 : Coordination Chemistry, Complexes	177
1. Definition	178
2. Crystal field theory	180
3. Nomenclature of complexes	181
4. Geometry of complexes	183

5. Isomerism of complexes	190
6. Stability of Coordination Compounds	193
7. Concentration Calculation	201
8. Influence of pH on the stability of complexes	204
9. Use of coordination compounds	205
➔ Exercises	208
➔ Solutions	211
Chapter 5: Heterogeneous equilibria, Precipitation	233
1. Introduction	234
2. Solubility Product, K_S or K_{PS}	234
3. Solubility in pure water	234
4. Solubility in another solvent, common ion effect	239
5. Influence of pH on solubility	241
6. Precipitation and complexation	244
7. Conditional Solubility Products	247
➔ Exercises	248
➔ Solutions	256
Chapter 6 :Oxidation-reduction, Electrochemical batteries	309
1. General and definitions	310
2. Application of Oxidation-Reduction - Electrochemistry	315
3. Prediction of redox reactions in aqueous media	334
4. Electronic Exchange Relationship, e.e.r.	339
5. Graphical representations	345
➔ Exercises	349
➔ Solutions	358
Chapter 7: Exam Topics	407
➔ Exams	408
➔ Corrected	429
Annexes	479
Bibliography	495
