Summary

Foreword	04
Préface	05
Symbols and Abbreviations Used in Organic Chemistry	06
SUMMARY	07
Chapter 1: The carbon chain	11
1. Principles of hybridization	12
2. Hybridization of carbon, oxygen and nitrogen	12
3. Resonance Hypothesis	13
4. Hybridization of oxygen and nitrogen	19
5. Resonance Hypothesis	20
6. Key Points	21
➔ Exercises	23
➔ Corrected	25
Chapter 2: Chemical function	33
1. Introduction	34
2. Definition of a Chemical Function	34
3. Classification of Functional Groupings	34
4. Determination of the degree of unsaturation.	35
➔ Exercises	37
➔ Corrected	39
Chapter 3: Nomenclature and Constitutive Isomerism	43
1. Introduction	44
2. Systematic nomenclature or I. U.P.A.C	44

3. Methodology of the nomenclature of the I.I. U.P.A.C	44
4. Nomenclature of bicyclic alkanes.	49
5. Isomerism of constitution	54
➔ Exercises	57
➔ Corrected	60
Chapter 4: Ethylene and optical isomerism	71
1. Introduction	72
2. Configurational isomerism	73
3. Conformational Isomerism	88
➔ Exercises	93
➔ Corrected	105
Chapter 5: Electronic Effects	153
1. Introduction	154
2. Inductive effects	154
3. Mesomeric effects	156
➔ Exercises	164
➔ Corrected	171
Chapter 6: Reaction species	195
1. Introduction	196
2. Reaction Intermediates	196
3. Key points	201
➔ Exercises	202
➔ Corrected	206
Chapte 7 : Reaction mechanisms	215
1. Introduction	216
2. Major types of reaction mechanisms.	216
2.1. Radical Addition Reactions	216
2.2. Substitution reactions	219
2.3. Electrophilic substitution reactions	225

2.4. Elimination Reactions	231
2.5. Rearrangement or transposition reactions	236
➤ Exercises	237
➤ Corrected	249

Chapter 8: Special Course– Pharmacy	297
--	------------

1. Diels-Adler cycloaddition reaction	298
2. Principles of spectroscopy	307
➤ Exercises	331
➤ Corrected	344

Bibliography	377
---------------------	------------
